

SMART DROPBOX

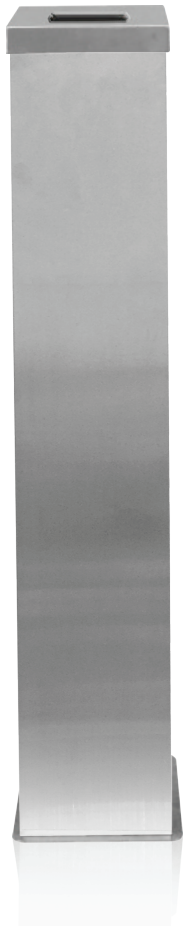

General Description

A drop box is a collection unit used to collect RFID access control card. Drop box unit is usually installed at access control exit gate to automatically collect temporary access control card such as visitor access card.

SMART DROPBOX is drop box with embedded-intelligent because it is simultaneously integrated with access control system (L-Intelligent Access) and visitor management system (Electronic Visitor Application).

SMART DROPBOX can be programmed to collect only valid visitor access card. It will identify and reject any invalid cards, for example: non-access card and non-visitor card. Upon collection, SMART DROPBOX will automatically check out the visitor from visitor management system and remove the visitor from access control system.

SMART DROPBOX also has capability to count number of cards in the collection unit. This information will be displayed on visitor management system application and user will be notified when they need to empty the SMART DROPBOX collection unit.

Technical Specifications
